COMBINATIONS OF DRUGS (E.G., A BENZIMIDAZOLE AND PENTAMIDINE) FOR THE TREATMENT OF NEOPLASTIC DISORDERS

Abstract of the Disclosure

The invention features a method for treating a patient having a cancer or other neoplasm, by administering to the patient (i) a benzimidazole or a metabolite or analog thereof; and (ii) pentamidine or a metabolite or analog thereof simultaneously or within 14 days of each other in amounts sufficient to inhibit the growth of the neoplasm.
